

LappyMat Step By Step Guide

Using your LappyMat:

Once you receive your LappyMat it is 100% ready to use right out of the plastic wrap. Below are instructions on how to use & care for your LappyMat.

Cleaning Your Laptop with LappyMats:

Dust & Dirt: Simply take your LappyMat in one hand and wipe the dusty or dirty areas until dust and dirt are removed.

Grease and Smudges: Your LappyMat will tackle most finger print smudges and grease marks by just gently wiping the infected area of your laptop. If grease is heavy feel free to lightly dampen part of your LappyMat with water and wipe the marks and then use a dry area of the LappyMat to make the laptop look like new.

Light Scratches & Abrasions: If you laptop has a light scratch or an abrasion lightly dampen part of your LappyMat and gently rub that area in a circular motion until the scratch is removed. *LappyMats is not liable for the amount of pressure put towards the infected area, but recommends a gentle circular motion with ample pressure.*

LCD Protection: LappyMats simply protect your LCD by lying in between your LCD screen and keyboard. Simply take your LappyMat and lay it on top of the keyboard and close the lid. Your system is now safe from scratches that maybe caused from the keyboard or track pad.

Caring For Your LappyMat:

LappyMats.com recommends that you machine wash your LappyMat on delicate cycle with cold water with like colors. You may tumble dry or air dry your LappyMat. This will allow your LappyMat to stay free from grease and dirt. ***DO NOT use bleach to clean your LappyMat, discoloring can and will happen if you use bleach on your LappyMat products.***
